Absolute-floor sensitivity: four-dataset equal-weight CSP-LDA
Zero is a separate reference; dotted line marks the historical floor
(a) Decoding performance
Balanced accuracy (%)
SubjectEA
DatasetEA -> SubjectEA
(b) Incremental gain: primary path
DS - S (pp)
Fixed post-D floor
Simultaneous 95% band
Relative-policy increment
(c) Secondary post-stage sensitivity
DS - S (pp)
Post-D floor fixed at 1e-8
Post-D floor follows numerical grid
(d) Subject reference clipping
Median clipped eigenvalues / 21
